#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Knutson et al, 6563862 and in view of Sugawara et al, US 2006/0181797.

Re claim 1, Knutson discloses in a communications receiver having a timing recovery module, carrier recovery module, automatic gain control module, and equalization module (col. 2, line 35-42), said communications receiver responsive to a received signal to form soft decision samples corresponding to said received signal and hard decision samples corresponding to said received signal, a method for jointly operating said timing recovery module, said carrier recovery module, said automatic gain control module, and said equalization module, said method comprising(col.2, line 35-42): using said control signals(col.6, line 19-21, where they mention a controller 250) to jointly determine operation of said timing recovery module, said carrier recovery module, said automatic gain control module, and said equalization module(col.2, line 31-36, "these functions can include: timing recovery for symbol synchronization, carrier recovery (frequency demodulation), and equalization. The receiver includes automatic gain control (AGC) and equalizer loops for each link). But he fails to teach explicitly about deriving control signals from said soft and hard decision samples. However,

Art Unit: 2611

Sugawara does (fig.1, page 1, Para [0006], line 25-28, where gain controller (12120 is a control signal and FIR filter (1206) and Viterbi decoder (1208) are the soft and hard decision samples.

Therefore, taking the combined teaching of Knutson and Sugawara as a whole, it would have been obvious to one of ordinary skill in the art to incorporate the arrangement of deriving control signals from said soft and hard decision samples as thought in Sugawara into Knutson to eliminate the gain error AG.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nurul M. Matin whose telephone number is 571-270-1188. The examiner can normally be reached on mon-fri (7:30-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mohammad Ghayour can be reached on 571-272-3021. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
